

ECHO BY ABEX

CASES AND PACKING SYSTEM

ECHO AIRTUB

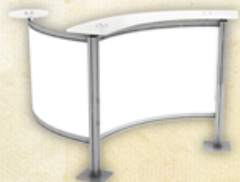

The Echo AIRTUB is the world's most advanced exhibit packing system. The result of years of industrial research and design, the Echo AIRTUB weighs hundreds of pounds less than conventional wood crates while offering superior component protection in transit as well as reduced drayage and shipping costs. Numbered components and packing location facilitates parts location to reduce set-up time.

AIRTUB

- Holds a standard 10' x 10' Echo exhibit
- Wheels for ease of transport
- Forklift friendly
- Comes complete with handy toolkit

DESIGNED BY ETHOS FOR ABEX

Introducing the world's first intelligently designed portable modular exhibit system. It is rare to find design, functionality and versatility keeping company, much less working together in such perfect harmony. This is what distinguishes Echo by Abex from every other portable modular exhibit solution on the market today.

In Echo by Abex, beauty is found in the smallest details. Frosted plex headers, wings and standoffs are attached with brushed aluminum fasteners to provide an elegant backdrop for corporate branding and messaging. Or choose from our selection of colored plex or laminates. We also offer a wide variety of graphic options including dye sub fabric, photo prints or opticlear on plex.

Incredibly strong, yet elegant. Functional, yet refined. The heart of Echo by Abex is an exceptionally strong, double-beamed Octanorm aluminum frame that reduces weight, allows graphic layering, supports AV options and provides structural integrity.

QUICK FACTS

Reconfigurable from a 10 x 10 to 10 x 20 • Built-in storage in each Echo unit • Maximum space utilization – Echo's footprint means your presentation won't be effected by what is around or behind you • A 10 x 10 Echo can support up to a 32" LCD monitor • Available color-changing LED lighting allows you to add dramatic, custom lighting effects on the show floor
