

Medium Duty Shelf, Connection & Orientation

Important:

All eight connectors must be inserted and tightened securing the shelf truss sections both top and bottom. (shown in **fig.1**, also see the **Connection Detail Sheet** for connector detail)

Note: Holes on the shelf truss sections need to face in towards each other. This is so the legs on the tray engage the holes in the shelf truss sections. (shown in **fig.1a**)

WARNING: You can not use more than one pair of shelf truss sections in a column of truss.

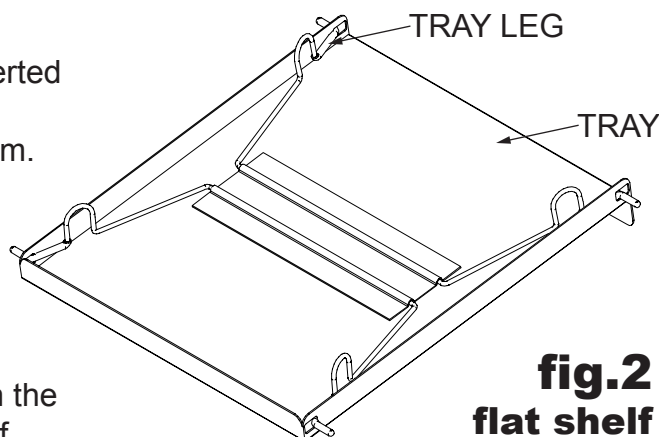

fig.2
flat shelf

Note: Tray is shown upside down. All four tray legs are to be inserted into tray slots, when used in the flat position. (shown in **fig.4**)

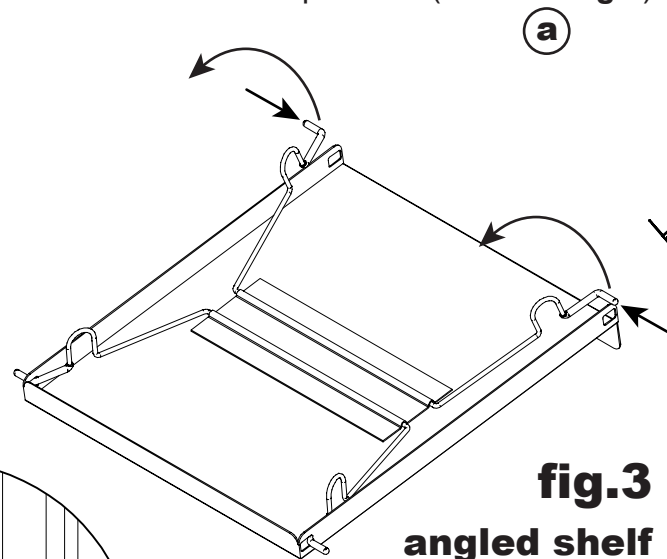

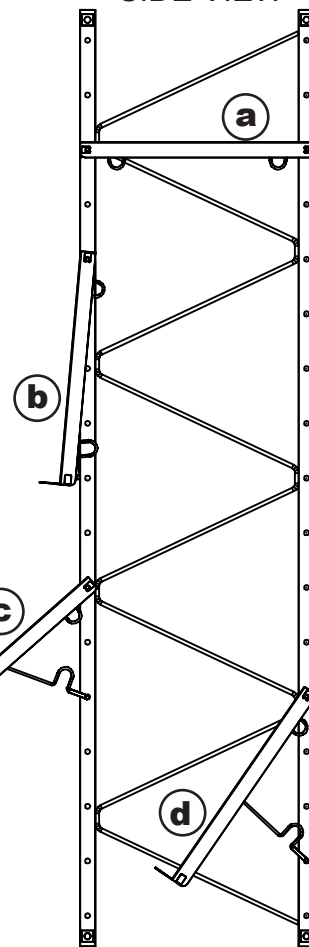

fig.3
angled shelf

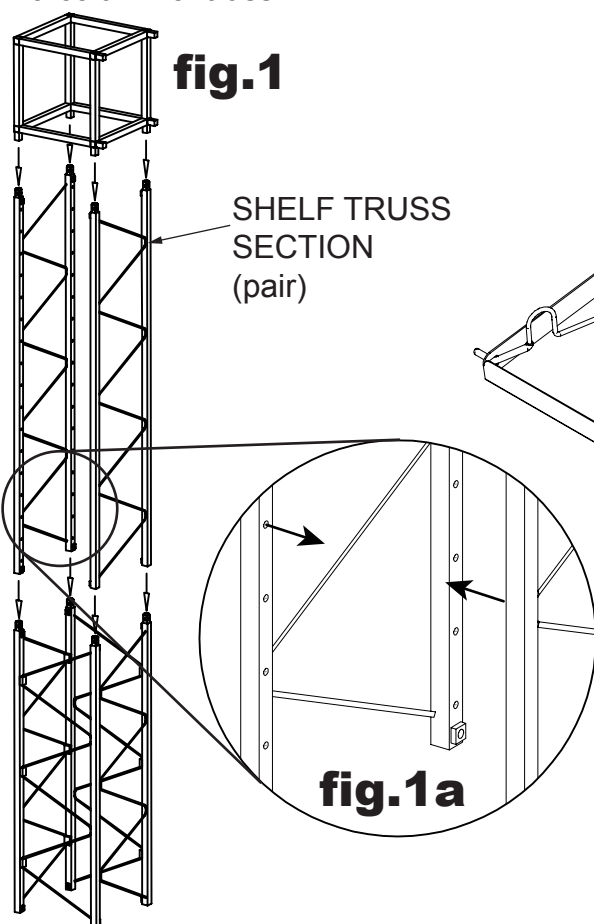

Note: Tray is shown upside down. When adjusting the shelf angle, disengage one set of tray legs and locate in desired hole location. (shown in **fig.4**)

fig.4
SIDE VIEW

Shelf Orientations

When used properly all four tray legs must be engaged into shelf truss section holes. (shown in **fig.4**)
